

## DYNTEK Thin-coat PlasterMesh

Dyntek Thin-coat PlasterMesh (TCM) is designed for use with skim coat plaster on AAC (autoclaved-aerated concrete) blockwork as well as drywall applications, such as joints, corners and crack repairs.

### Benefits:

Dyntek Thin-coat PlasterMesh is manufactured from BS2989:1982 conforming pre-galvanised steel into small diamond configuration so as to provide excellent bonding and reinforcement to fine skim coat plaster of 3 to 6mm thickness. Most importantly it is designed for the prevention of plaster crack by resisting the tension in skim coat plaster caused by differential/thermal movement (between dissimilar materials).

Product Code	Width (mm)	Length (m)
TCM150	150	1.2
TCM300	300	1.2
TCM450	450	1.2

Use Dyntek SB-50 Adhesive for fastening TCM to steel, concrete or AAC Blockwork surfaces. Other widths available upon request.
